

APPENDIX

Appendix A

RULES AND REGULATIONS GOVERNING REFUSE COLLECTION

1. *Area around cans.* Refuse cans, and areas around them, shall be kept in a sanitary condition.
2. *Container construction.* All refuse containers shall be metal, and of such size and construction that they can be handled easily by collectors. The 30-gallon refuse can is recommended.
3. *Weight when filled.* No receptacle shall be filled to such a degree that it will weigh over 150 lbs.
4. *Collection.* The collector of the refuse shall not be required to pick up refuse unless the same is properly prepared for the collection by the tenant, or owner in conformance with these rules and regulations. Rubbish, such as tree clippings, cartons, crates and boxes that are larger than can be contained in the receptacles, must be so secured or prepared that they can be handled easily by the collectors.
5. *Ashes separate.* Ashes shall be kept in a separate receptacle. Other rubbish and garbage may be kept together in one container.
6. *Cover for garbage.* Any receptacle containing garbage shall be covered with a tight fitting cover.
7. *Cover for other rubbish.* Receptacles containing ashes or other rubbish only, shall be covered so that they will not fill with rain, water or snow.
8. *Liquids.* Containers shall not contain any liquid or semi-liquid waste.
9. *Inflammable materials.* No explosive or highly inflammable material shall be placed for collection, either separately, or with other refuse.

Historical Note: Adopted June 4, 1980
