Hi Penny,

Thanks for the Urban compact map. You did answer that question, but the map is helpful also. I have SW Cole taken care of for now. They will let me know if there is anything else they need before they go on site.

I did email public works, but not about this. I am still looking for the information on the water pressure and any flow tests at the nearest hydrant.

SW Cole should be made aware if there are any utilities that are still active that cross the site.

Here's their map for proposed borings based on the historic utility maps you sent to us last year. The red lines are potential utility lines from that map.

Thanks
Shelly

Good morning –

Are you handing their questions about:

“Is it possible to share the cad file for the site? As there is not much to reference on-site, it will be ideal to utilize a sub-meter GPS for boring layout and the cad file would be very helpful to create this layout file.”

I have emailed Mike and Dave (Public Works) to make sure they have it accessible.

Hi Shelly,

We currently have the borings scheduled to begin on March 18th. Is it possible to share the cad file for the site? As there is not much to reference on-site, it will be ideal to utilize a sub-meter GPS for boring layout and the cad file would be very helpful to create this layout file. Please let me know, thanks!

Nate

Hi Shelly, glad to hear things are moving forward! Thanks for sharing this as I have not heard anything from the City. We are currently scheduling about 4 weeks out but I will get a request into our drilling manager and let you know our tentative start date soon.

Nate

Hi Nate,

The City of Caribou finally approved the Geotech work at the Birds Eye site.

I'm attaching the contract in case they did not forward it to you.

It would be helpful if you could let me know your schedule on this.

Thanks

Shelly
